

Q1) a) i) Candidate Keys: SID, Area, PID

ii) Dependencies:

iii) 1NF: 2NF fails as Qty depends on PID which is a candidate Key. 1NF satisfied due to atomicity & presence of primary key

iv) 3NF:

remove dependencies between non primary key attributes
Also in BCNF.

b) Atlanta (PID, name, GID, Gdate, position)

i) keys: PID, GID

ii)

iii) 1NF, atomic & primary key (PID) exists but violates 2NF as there are dependencies on subset of PK : $\{PID\} \rightarrow \{Name\}$ & $\{GID\} \rightarrow \{Gdate\}$

iv)

⇒ Now in BCNF ⇒ no dependencies on non-candidate keys & only depend on PKs.

c) Grade(SID, CRN, Cname, grade)

i) keys: SID, CRN

ii)

iii) 1NF, partial dependency b violates 2NF

iv)

⇒ BCNF: every non-primary attribute depends only on PKs, no transitivity

d) Exam(S, J, P), no two studies have same position

i) J, P are keys

ii)

iii) BCNF

iv) No more normalization can be done

e) PHD (P, H, D), each patient examined by only one doctor, each doctor works for one hospital

i) keys: P

iii) transitive dependency in b so 2NF.

Now in BCNF as no transitive dependency
& since it is only one PK, 3NF = BCNF

Q2) a) Grant Select, Update ON Employee,
Dept_locations, Project, Department, Works-On
to A With Grant option;

b) Create View Emp As Select FName, MINIT,
LName, SSN, BDate, Address, Sex, Superssn, DNO
From Employee;

Create View Dep As Select DName, DNumber
From Department;

Grant Select On Emp to B;
Grant Select On Dep to B;

c) Grant select, Update On Works-On to C;

Create View CEmp As Select FName, MINIT,
LName, SSN From Employee;

Create View CProj As Select PName, PNumber
From Project;

Grant Select On CEmp to C;
Grant Select on CProj to C;

d) Grant Select On Employee, Dependent to D;
Grant Update On Dependent to D;

e) Create View EEmp As Select * From
Employee Where DNO = 3;

Grant Select On EEmp to E;
